1 Description

1.1 *Introduction*

This document describes the integration of Panasonic air conditioning systems into BACnet compatible devices and systems using gateway *INBACPAN001I000.*

The aim of this integration is to monitor and control your Panasonic air conditioning system, remotely, from your Control Center using any commercial SCADA or monitoring software that includes a BACnet driver or connect it to other BACnet devices to do any automation. To do it so, Intesis allows BACnet communication allowing polling or subscription requests (COV).

Intesis makes available the Panasonic air conditioning system indoor units through independent BACnet objects.

Abstraction of Panasonic air conditioning system properties and functionalities as fixed BACnet Objects. Intesis allows fixed BACnet object IDs mapping. Simple configuration is needed: just select the appropriate communication parameters (MAC address, baud rate…).

This document assumes that the user is familiar with BACnet and Panasonic technologies and their technical terms.

1.2 *Functionality*

Intesis continuously read the Panasonic AC unit and keeps the updated status of all objects in its memory, ready to be served when requested from the BACnet side.

The role of Intesis consists in associate the elements of the Panasonic AC unit with BACnet objects.

The control of the indoor units through the INBACPAN001I000 is permitted, so commands toward the Panasonic AC unit are permitted too.

The indoor unit is offered in a set of BACnet objects and extra functionality.

1.3 *Capacity of Intesis*

Intesis is capable of integrating one single Panasonic AC unit and its associated elements.

Element	Max.	Notes
Number of indoor units	1	Number of indoor units that can be controlled through Intesis
Number of Objects	36	Number of Panasonic AC signals available as objects into Intesis.

1.4 *Quick Setup*

1. Install Intesis in the desired installation site (DIN rail mounting inside a metallic industrial cabinet connected to ground is recommended).

2. Connect the communication cables. Details in section 6.

3. Connect to the Intesis. Details in section 7.5.

4. (Optional) Configure the Intesis using the configuration tool. Details in section 7.5.2.

5. Check the BACnet objects list for its integration to your BACnet project. Details in section 5.2.

6. Check if there is communication between BACnet and AC system. Details in section 7.5.3.

7. The Intesis is ready to be used in your system.

Product Description:

Panasonic air conditioning system – BACnet MS/TP & BACnet IP Gateway

Abstraction of Panasonic air conditioning system properties and functionalities as BACnet Objects.

2.1   *BACnet Standardized Device Profile (Annex L):*

☐ BACnet Operator Workstation (B-OWS)

☐ BACnet Building Controller (B-BC)

☐ BACnet Advanced Application Controller (B-AAC)

☒ BACnet Application Specific Controller (B-ASC)

☐ BACnet Smart Sensor (B-SS)

☐ BACnet Smart Actuator (B-SA)

Additional BACnet Interoperability Building Blocks Supported (Annex K):

5.3 Objects and properties

Below you can find relevant information for the objects and properties.

Object_Identifier: In the **Device Object**, is configurable writing directly on the property. either from BACnet or through our configuration tools and can be set automatically or manually. When set automatically, it is set using a base address and the address selected in SW2 P1..P7. The base address can be selected using the configuration tool. When set manually, the address is directly the one configured on the configuration tool. See section 7.4 for more information

Object_Name: In the **Device Object**, is configurable writing directly on this property. This can be done using the configuration tools too. See section 7.4 for more information.

Description: In the **Device Object**, is configurable writing directly on the property, length maximum 63 chars. This string is configurable using the configuration tool. See section 7.4 for more information.

6   Connections and switches

6.1   *Connect to the AC indoor unit interface*

The interface comes with a cable (1,9 meters long) for direct connection to the internal control board of the AC indoor unit.

Disconnect mains power from the AC unit. Open the front cover of the indoor unit in order to have access to the internal control board. In the control board locate the socket connector marked as **CN-CNT**.

Using the cable that comes with the interface, insert one of its connectors, the one installed in the shortest uncovered part, into the socket of the INBACPAN001I000 marked as **AC Unit**, and the other connector, the one in the largest uncovered part, into the socket **CN-CNT** of the AC unit's control board. Fix the INBACPAN001I000 outside the AC indoor; remember that INBACPAN001I000 must be also connected to the BACnet network. Close the AC indoor unit's front cover again.

⚠ *Important*: Do not modify the length of the cable supplied with the interface, it may affect to the correct operation of the interface

Figure 2.2 Connection diagram

Please, check the configuration for the AC unit to ensure proper control of the AC unit according to its specifications. Use **SW4** and **SW3** for that purpose.

SW3 - Celsius/Fahrenheit selection

6.2 *Connect to BACnet MS/TP*

Connect the EIA485 bus wires to the plug-in terminal block (EIA485) of INBACPAN001I000; respect the polarity on this connection (A+ and B-).

Connect the ground signal to the plug-in terminal block (SG).

Respect the maximum distance of 1.200 meters for the bus, no loop or star topologies are allowed for EIA485 bus.

Remember that a terminator resistor of 120 Ω must be present at each end of the bus to avoid signal reflections and also a polarization mechanism. Please, use switch **SW1** in order to configure these parameters.

Binary value $b_2…b_0$	Decimal value	Switches 1 2 3	Description
0xx	**0**	↓ x x	EIA485 bus without termination resistor. The gateway is not at one end of the EIA485 bus (default value)
1xx	**1**	↑ x x	120 Ω termination resistor active. The gateway is at one end of the EIA485 bus
x00	**0**	x ↓ ↓	No bus polarization
x11	**3**	x ↑ ↑	Bus polarization active

Please, check as well configuration on **SW2** and **SW3** before connecting to BACnet MS/TP.

6.2.1 MS/TP MAC address switch configuration

MAC address can be configured using **SW2** DIP-Switch

Binary value $b_0…b_7$	Decimal value	*Switches* 1 2 3 4 5 6 7 8	MAC address
0000000x	0	↓ ↓ ↓ ↓ ↓ ↓ ↓ x	0

0111111x	126	↓ ↑ ↑ ↑ ↑ ↑ ↑ x	126
1111111x	127	↑ ↑ ↑ ↑ ↑ ↑ ↑ x	127

The MAC address selected my affect on the Device Instance. If the "Auto Device Instance" is used, keep in mind that the Device Instance will be build using the "Device Instance Base" + the address selected in SWP2 P1-P7. Please, check section 7.4 for more information.

6.2.2 MS/TP activation and baudrate

Select the right baudrate for BACnet MS/TP communication using switch **SW3**.

Binary value $b_5…b_4$	Decimal value	Switches 1 2 3 4 5 6 7 8	Description
0xxxxxxx	**0**	↓ x x x x x x x	BACnet MS/TP active (default value)
1xxxxxxx	**1**	↑ x x x x x x x	BACnet IP active
x000xxxx	**0**	x ↓ ↓ ↓ x x x x	Autobaudrate (default value) *
x100xxxx	**1**	x ↑ ↓ ↓ x x x x	9600 bps
x010xxxx	**2**	x ↓ ↑ ↓ x x x x	192000 bps
x110xxxx	**3**	x ↑ ↑ ↓ x x x x	38400 bps
x001xxxx	**4**	x ↓ ↓ ↑ x x x x	57600 bps
x101xxxx	**5**	x ↑ ↓ ↑ x x x x	76800 bps
x011xxxx	**6**	x ↓ ↑ ↑ x x x x	115200 bps
x111xxxx	**7**	x ↑ ↑ ↑ x x x x	Autobaudrate *
xxxx0xxx	**0**	x x x x ↓ x x x	Celsius degrees (default value)
xxxx1xxx	**1**	x x x x ↑ x x x	Fahrenheit degrees

⚠ **Important**: Remember that switch changes only apply after an Intesis power cycle

* Note: If Autobaudrate is selected, the INBACPAN001I000 will look for another BACnet MS/TP device with a fixed baudrate in order to match this value. Once detected, the baudrate will not be modified until a device reset is produced.

6.3 *Connect to BACnet IP*

Connect the RJ45 connector to the Ethernet connection (ETH) of INBACPAN001I000.

Respect same recommendations as per any other Ethernet communication network.

Remember to activate the IP interface through the **SW3** switch.

Binary value $b_5…b_4$	Decimal value	Switches 1 2 3 4 5 6 7 8	Description
0xxxxxxx	**0**	↓ x x x x x x x	BACnet MS/TP active (default value)
1xxxxxxx	**1**	↑ x x x x x x x	BACnet IP active

By default, the INBACPAN001I000 comes with a static IP address: **192.168.100.246**.

In order to change it, please use the configuration tool and select either DHCP or another static IP (recommended) that suits your integration project requirements. Check section 7.4 for more information.

6.3.1 BACnet Device Instance

If the "Auto Device Instance" is used, keep in mind that the Device Instance will be build using the "Device Instance Base" + the address selected in SWP2 P1-P7.

Binary value $b_0…b_7$	Decimal value	Switches 1 2 3 4 5 6 7 8	MAC address

7   Set-up process and troubleshooting

7.1   Pre-requisites

In a BACnet MS/TP integration, it is necessary to have the BACnet MS/TP Master device operative and well connected to the BACnet MS/TP port of the INBACPAN001I000.

In a BACnet IP integration, it is necessary to have the BACnet IP client operative and well connected to the IP network and the INBACPAN001I000 connected to this same IP network through the ETH port.

Items supplied by HMS Networks for this integration are:

- Intesis INBACPAN001I000 interface with Panasonic AC external protocol firmware loaded.
- Specific connection cable to connect Panasonic AC unit with INBACPAN001I000 gateway.
- MiniUSB cable for console communication.
- Product documentation.

7.2   Physical checking

First point to look at to make sure that gateway is working properly is to check physical connections:

1.- Make sure that the supplied cable is correctly connected between the AC unit and the gateway. INBACPAN001I000 needs to be connected to the AC unit or externaly powered before starting the device configuration. Contact Intesis if you need to power your device without connecting it to the AC unit.

2.- Check that the AC unit is connected to mains.

3.- If using BACnet MS/TP, check the EIA485 connection from the gateway to the BACnet MS/TP. Remember to verify polarity and terminal resistors configuration. If using BACnet IP, check the IP network connections.

7.3   LED status

On start up, all leds blink once and then turn off. After that, depending on the type of connection (MS/TP or IP) and the processes carried out, LED status may change.

Please, check the table below for more information:

LED	Status	Description
L1 (red)	ON Steady	AC communication error
	Blinking	AC error
	Off	No errors present
L5 (green)	ON Steady	BACnet MS/TP link
	Blinking	Activity on the BACnet MS/TP bus
L6 (green)	ON Steady	Ethernet link
	Blinking	Activity on BACnet IP
L1+L4+L5	Blinking	Device in Bootloader mode
All	Blinking	Fatal Error
All	On Steady 1 sec	On start up (for testing purposes)

URL   https://www.intesis.com
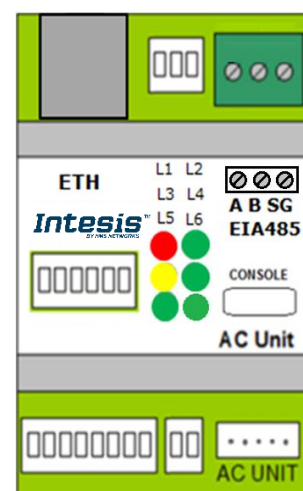

7.4 Occupancy

Each indoor unit has its own occupancy signal. Remember that these signals needs to be feed by an external sensor which indicates if there is presense or not (occupancy). This signal is processed directly in the INBACPAN001I000.
When occupancy mode is active, according to current room temperature it will set the mode, setpoint and on/off, for example:

- Room Temperature > OCS: Setpoint = OCS, Mode = Cool, On/Off = On
- Room Temperature < OHS: Setpoint = OHS, Mode = Heat, On/Off = On
- OCS < Room Temperature > OHS: Setpoint = OCS/OHS depending on current mode (if Fan or Dry mode is active => no setpoint is sent), On/Off = On

When unoccupancy mode is active, according to current room temperature it will set the mode, setpoint and on/off, for example:

- Room Temperature > UCS: Setpoint = UCS, Mode = Cool, On/Off = On
- Room Temperature < UHS: Setpoint = UHS, Mode = Heat, On/Off = On
- UCS < Room Temperature > UHS: Setpoint = UCS/UHS depending on current mode (if Fan or Dry mode is active => no setpoint is sent), On/Off = On (if Unoccupancy Deadband Action is = 1)

These checks will be done each time the indoor unit occupancy status is changed, and if **check continuously** checkbox is checked, also each time the room temperature changes.

The configuration set on the occupany signals is applied from the very first moment the occupancy signal is enabled until the user changes the setpoint, mode or the On/Off signal, which disables occupancy functionality.

The minimum difference between Cool and Heat SetPoints must be 2ºC/4ºF.

Occupancy Cool SetPoint (OCS) ———————— Unoccupancy Cool SetPoint (UCS)

Occupancy Heat SetPoint (OHS) ———————— Unoccupancy Heat SetPoint (UHS)

7.5 Configuration tool

In order to check the status of the device, signals values and general configuration, the INBACPAN001I000 includes a configuration tool. This tool is accessible only through the Ethernet port, so keep in mind that you need to switch **SW3** P1 'ON'.

By default, the device comes with a static IP, so please check that you are in the same network domain in order to connect. The default IP is: **192.168.100.246**.

7.5.1 Home

Once you reach the page, remember to login with your user and password. To access the login site, click on "User" or use the drop-down menu on the top right corner for user selection.
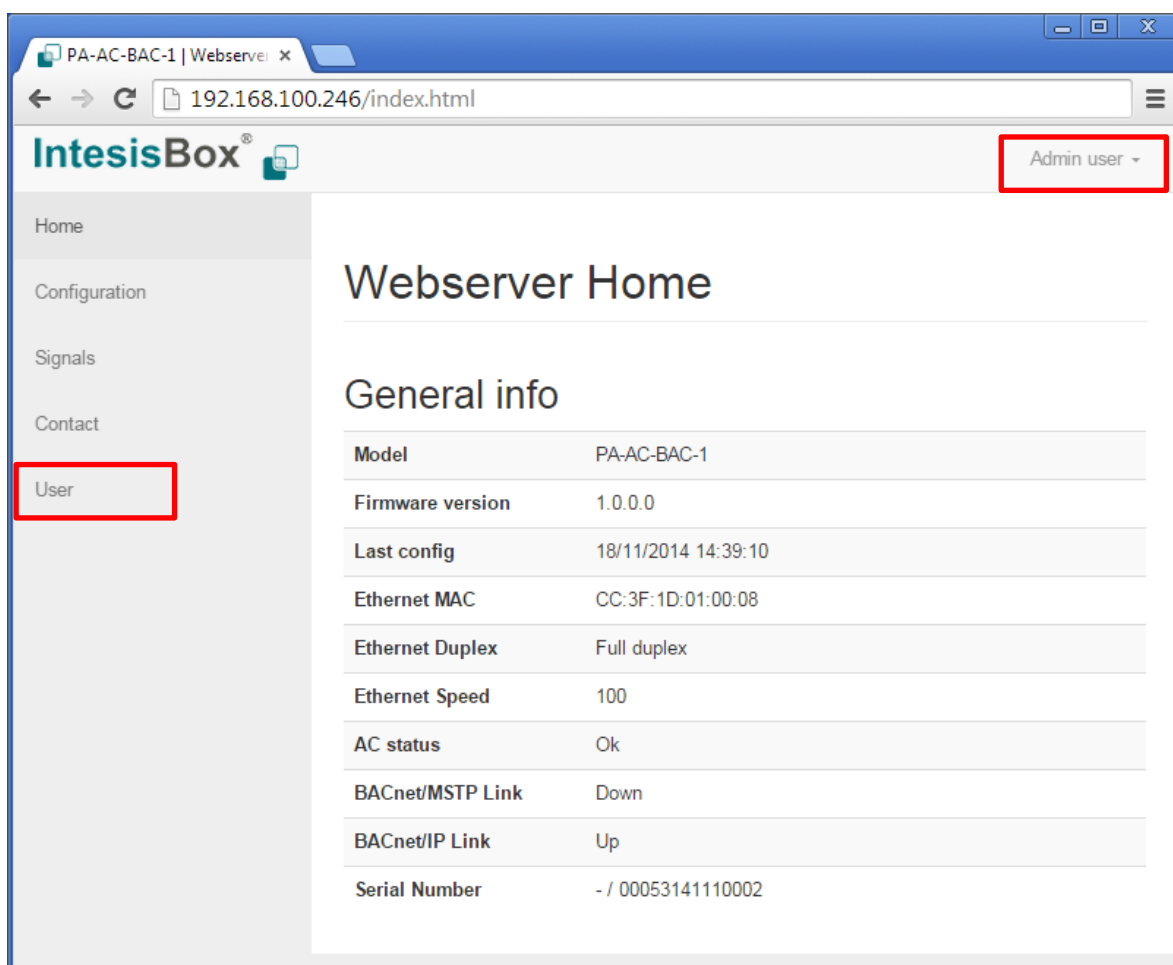

There are two access levels: *admin* and *operator*. The default password value for each user is *admin* ➔ admin and *operator* ➔ operator.

Admin has total control on the device configuration, and it can control the AC unit from the web app itself. On the contrary, operator can only read information from the current configuration and can operate the AC. Priority used when using the operator mode is always set to 8.

IMPORTANT: Once configuration is done, we recommend changing the passwords to ensure access control on the gateway.

7.5.2 Configuration

On the configuration section, general **BACnet settings**, specific **BACnet MS/TP** and **BACnetIP settings**, **IP seetings** and **AC settings** can be configured. Each type of parameter is grouped in different blocks.

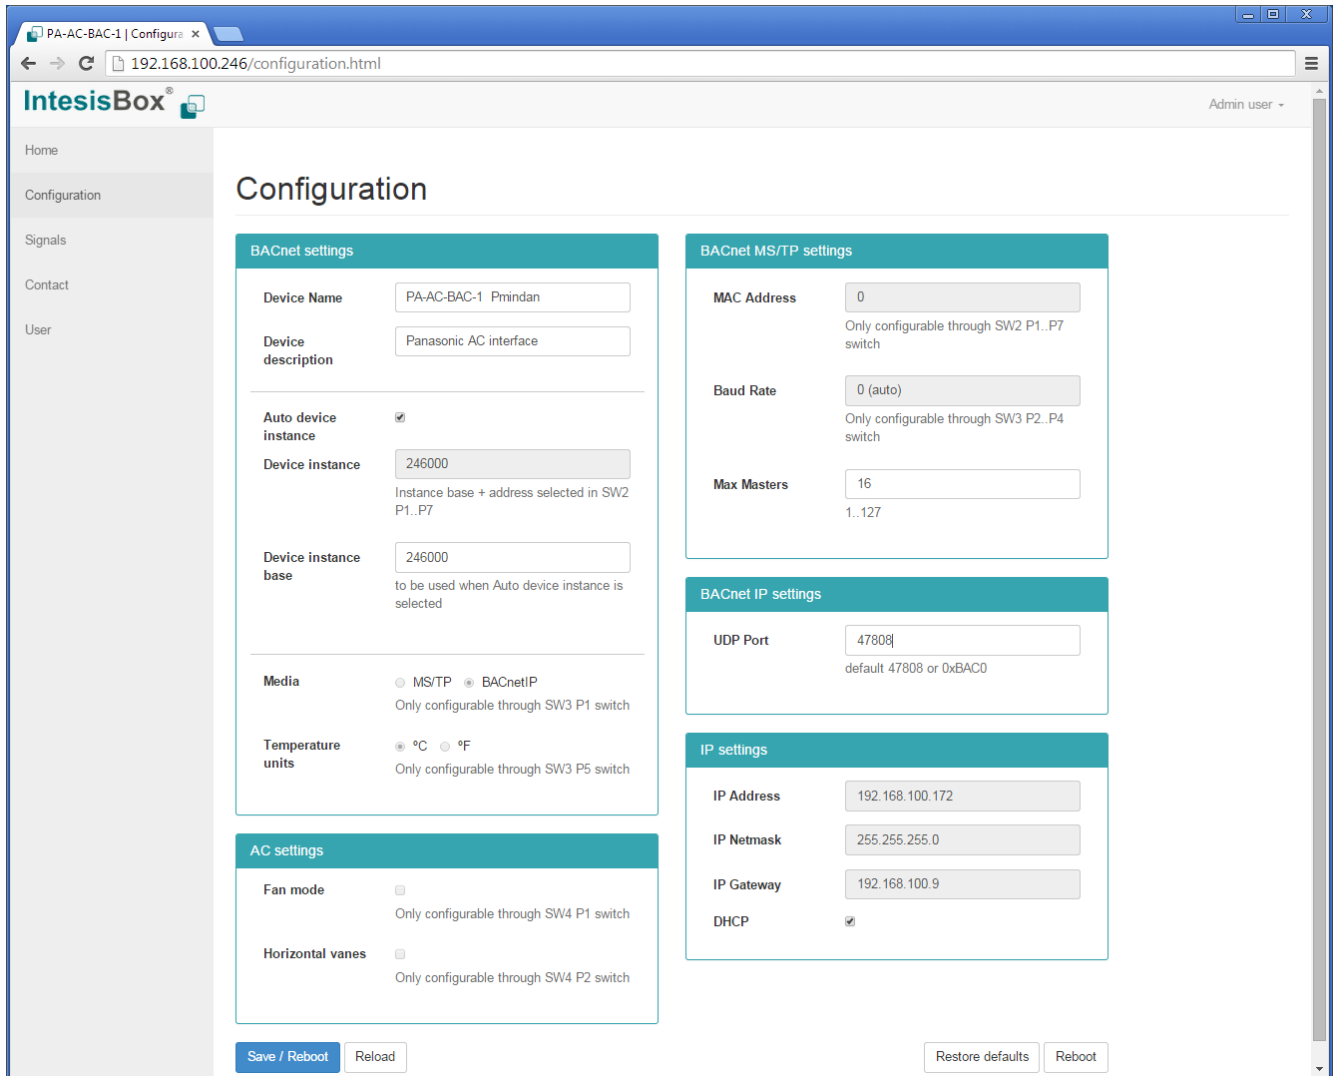

7.5.3 Signals

On this section a complete list of the available BACnet objects, their **type**, **Object Instance**, **priority** and current **value** is shown. Clinking on the "**Edit**" button, users will be able to command the system having feedback from both BACnet and AC system.

It also allows continuous monitoring of the current status of the variables. The refresh time for the AC information is shown using a progression bar in the top and the bottom of the signals list.
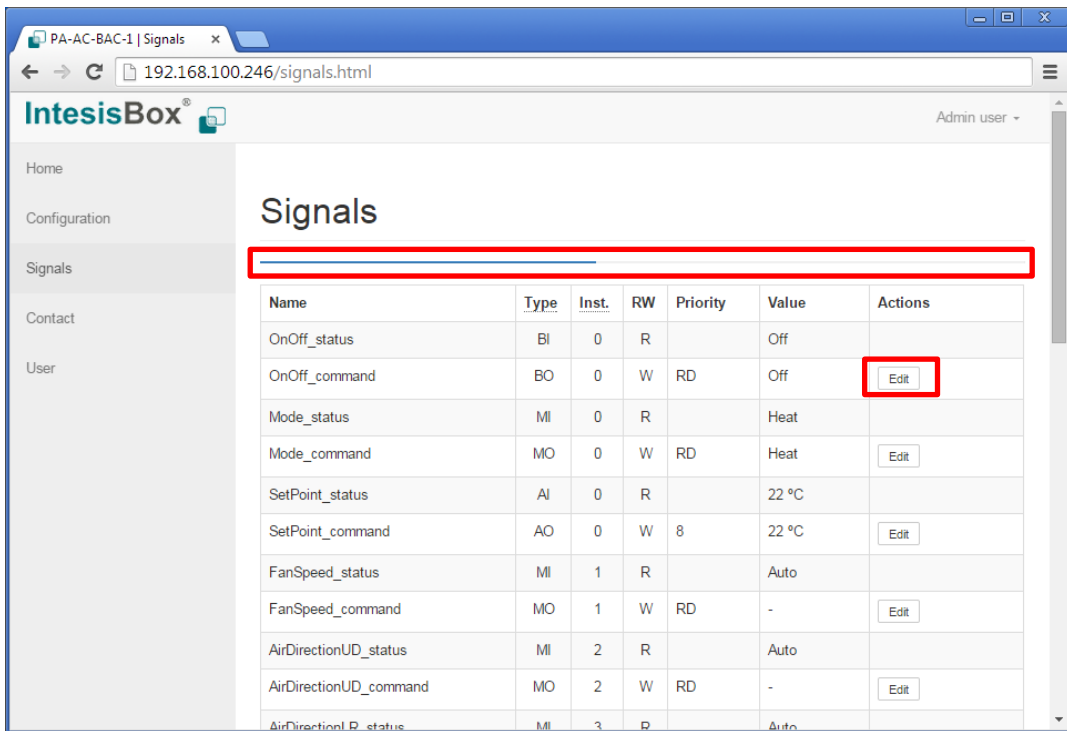

When you click on "Edit", you will have the change of introducing a new **value** to be applied and also the **priority**.
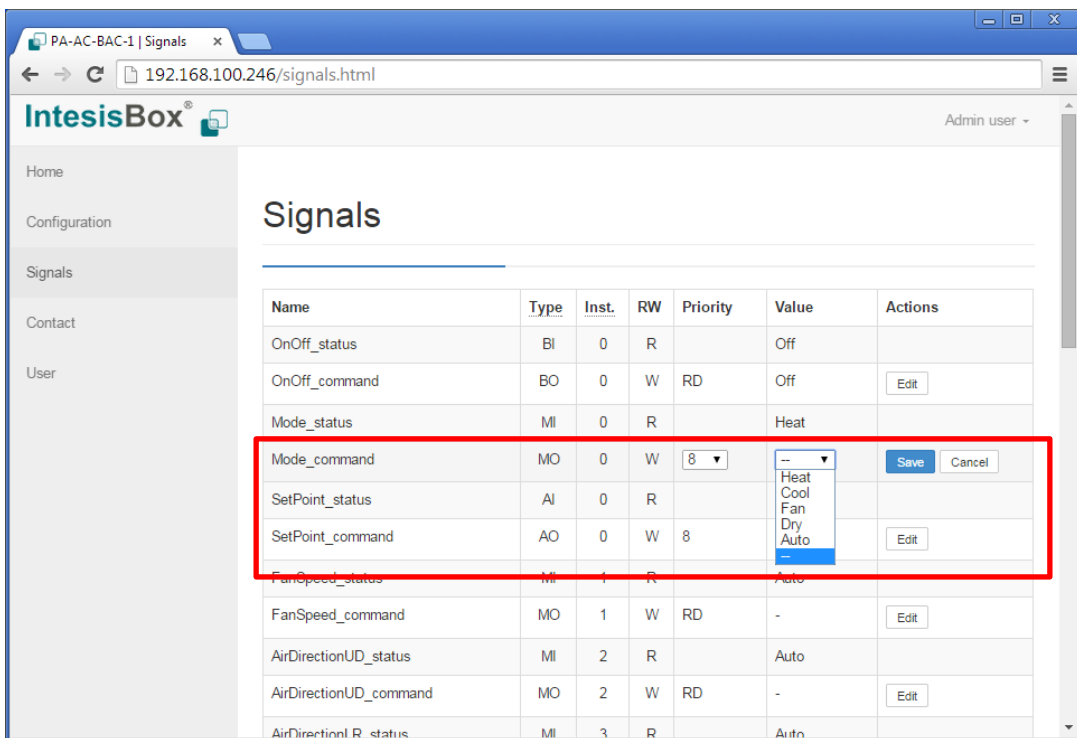

NOTE: If you want to relinquish the selected priority, please use the '--'command.

8 AC Unit Types compatibility

Please, check compatibility list at to know which Panasonic units are compatible with our gateway.
