

PIE-1 is an encoder that converts analog relay outputs to original ASCII code (Redwall Event Code) for Redwall and Fiber SenSys detectors. Detectors can be connected to Video Management Software platforms with PIE-1 and control IP cameras.

PIE-1 is generating Redwall Event Code using the analog alarm inputs from the Redwall and Fiber SenSys detectors. Video Management Software receives the event code and sends a command to reposition to a pre-set and/or start recording with a camera.

PIE-1 is compatible with Power over Ethernet (PoE). IEEE802.3 af/at making it possible to supply power using a PoE hub or switch.

Only one LAN cable is needed to connect PIE-1 to a PoE hub or switch reducing your installation time and cost.

## FEATURES

- **Change Analog to IP**

PIE-1 changes analog relay output signals (N.C.) to original ASCII code.

- **Compatible with Power over Ethernet**

PIE-1 can supply power to detector using a PoE hub or switch.
