TEMPERATURE PROBE INPUT CONNECTION

Any combination of the following accessories is allowed in the inputs:

Temperature Probe* **

⚠ Commons of different devices must not be connected together.

* May be a Zennio temperature probe or any NTC with known resistance values at three points in the range [-55, 150 °C].

** To use a temperature probe as an internal sensor, a proper thermal transfer must be ensured, for example, by installing it in the small internal notch of the Zennio decorative frame (sold separately).

INSTALLATION INSTRUCTIONS

* (Optional) Insert the metallic levelling plate/s so the device stays at the desired level.

SAFETY INSTRUCTIONS AND ADDITIONAL NOTES

- Installation should only be performed by qualified professionals according to the laws and regulations applicable in each country.
- Do not connect the mains voltage nor any other external voltage to any point of the KNX bus; it would represent a risk for the entire KNX system. The facility must have enough insulation between the mains (or auxiliary) voltage and the KNX bus or the wires of other accessories, in case of being installed.
- Keep the device away from water (condensation over the device included) and do not cover it with clothes, paper or any other material while in use.
- In order to improve the lifespan of the LED indicators, parameterising constant lighting is not recommended.
- The WEEE logo means that this device contains electronic parts and it must be properly disposed of by following the instructions at <https://www.zennio.com/en/legal/wEEE-regulation>.
